

## Module Contributions

*My user handle is “Maiykul” in the screenshots below.*

 **Maiykul** 10/03/2022  
[@Shan](#) scope creep is reality. We've faced that previously with the software module, but it's all good. Experience helps guide us on when enough is enough.  
And to add, it's team effort so we'll all get to agree or disagree

 **Maiykul** 21/03/2022  
<https://pmhut.com/smart-requirements-introduction>  
Reference to SMART requirements. The concept is used in TOGAF too 🤔 (edited)

 **Maiykul** 26/03/2022  
It's ok if it's simple because as long as we show our project management thought process of refining or defining and managing the customers requirements. It may be the other team members fear togaf framework and so consider using some alternative. Let's see at todays meet-up.

 **Maiykul** 26/03/2022  
Yes this is perfect because it shows (diagrammatically) our thought process as project managers. It shows we consider that requirements are not just words written on paper but encompass so many touch points that help us flesh out well-considered requirements which will better inform our sprint plans which in turns ensures we deliver the Right Thing, On Time.

 **Maiykul** 29/03/2022  
Keep Smart. It's the only thing of value in real world. Volere is overboard and hyper excessive. Good luck to the management team that thinks 70 pages is acceptable in an agile environment  
👍 1

 **Taylor Edgell** 29/03/2022  
Would we want to consider both in the document ?

 **Maiykul** 29/03/2022  
Absolutely agreed! It's unrealistic. Yes likely suitable for the old generation that have nothing better to do than write crap that will never be referenced

 **Maiykul** 29/03/2022  
I think we should consider only that which we will find in actual use today. Gambling money is 100% on SMART: it's a great guide to writing requirements (edited)  
Volere is good because it gives an idea of the scope and types of things to consider for requirements. But like [@asmirnov](#), would never recommend this approach to anyone.  
Why? Consider: 70 pages to document why we need to put a button on the webpage, or change label text colour from green to purple. No ways Josés!  
And lastly documents require management and change control. Good god! Teams would spend days just reviewing the said button change. Holy Red American Indian totem poles!

 **asmirnov** 29/03/2022  
If you really think about it, Volere directly contradicts one of the core agile principles of "just enough documentation". So it'd be weird justifying the usage of Scrum, the most well known agile development framework, and Volere in the very same document.

 **@asmirnov** If you really think about it, Volere directly contradicts one of the core agile principles of "just enough documentation". So it'd be weird justifying the usage of ...

 **Maiykul** 29/03/2022  
Well put 😊

 **@gclarke** My only concern though is that Volere is mentioned in the learning material with a template, so I think we should at least reference in the doc. Maybe we expli...

 **Maiykul** 29/03/2022  
Do you think we *should* reference Voltaire?

 **Maiykul** 30/03/2022  
<https://www.cs.uic.edu/~i440/VolereTemplate.pdf>  
 1

 **Maiykul** 30/03/2022  
yes agreed. He's confirming the failure of rushing ahead without a form of "plan".

"Fail to prepare; Prepare to Fail" (edited)

<https://balsamiq.com/>

**Balsamiq. Rapid, Effective and Fun Wireframing Software | Balsamiq**

Balsamiq is the company behind Balsamiq Wireframes, the industry standard low-fidelity wireframing tool.

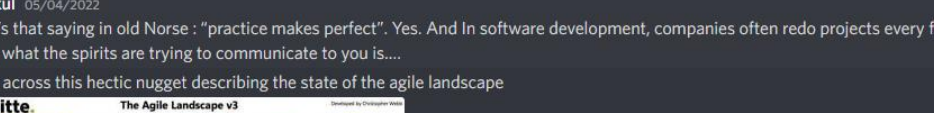

The screenshot shows the Balsamiq website with a red background and a pattern of small smiley faces. The main headline reads "Life's too short for bad software!". Below it, a sub-headline says "With Balsamiq Wireframes, anyone can design great user interfaces." and a mission statement at the bottom states "Since 2008, our mission is to help rid the world of bad user interfaces."

**Maiykul** 05/04/2022

What's that saying in old Norse : "practice makes perfect". Yes. And In software development, companies often redo projects every few years. So.... I guess what the spirits are trying to communicate to you is....

Came across this hectic nugget describing the state of the agile landscape

 @asmirnov So what does this have to do with user experience? 

 Maiykul 08/04/2022

A guess is that good UX needs to have user stories / behaviours defined. In order to assure the customer the *functionality* works as expected, I guess this is the role of pytest. It's like some kind of integration testing where the testers ensure the *functionality* of the UI delivers

 **Maiykul** 08/04/2022  
OK. is it  
1. Educational  
2. able to be operated with one hand  
3. ffffffffffffffffffffffffffffffffff

If "yes" to any or none of the above, then absolutely, this is *exactly* what the customer has requested. It's not that the customer is "right", it's that they need help to know what constitutes "right". We're here to show them, and a singleton-chrome is the exact thing they did not even *know* they needed. So, we did the right thing. (edited)

 **@asmirnov** Nah, we just do it. Isn't adapting to change what Agile all about? (edited)  
**Maiykul** 08/04/2022  
Yeah exactly. Adapting to mid-term changes, scope-creep and all. And i think if we deliver this new wireframe as THE deliverable on Sunday, we can at least demonstrate real world Agile techniques

 **Maiykul** 10/04/2022  
Hiya @grace, is all ok that side? (edited)

A screenshot of a tweet on a dark background. The tweet is from user @asmirnov, dated 11/04/2022. The text of the tweet is: "UX designer to Product owner: - How boring do you want it to look? - Yes. Five minutes later. - Is this drab enough? - No. You're giving me dis..." The word "disgusting" is partially visible and cut off. Below the text is a meme image featuring the character Mrs. Potts from Disney's Pixar movie 'The Incredibles'. She is wearing her signature black dress and glasses, looking exasperated with her hands on her hips. The text overlaid on the image reads: "Dahling! You're giving me 'colourful', but I want DRAB!". The word "colourful" is in multi-colored letters, while "DRAB" is in bold black letters. At the bottom left of the tweet, there is a yellow smiley face emoji and the number "1".

 **asmirnov** 17/04/2022  
- Add a few extra user stories ClickUp

 **Maiykul** 17/04/2022  
If Tdd is not specified as a deliverable, then there is no need to deliver on it  
[@asmirnov](#) agreed.

 **Maiykul** 17/04/2022  
[@Shan](#) but every little bit helps 😊  
[@Taylor Edgell](#) no they wouldn't. But they'd be interested in how or deadlines

 **Maiykul** 28/04/2022  
[@asmirnov](#) thanks. happy to join, but won't be very active since i am busy sorting out a work issue

 **Maiykul** 28/04/2022

👍 1

 [@gclarke](#) "Hi sorry

 **Maiykul** 28/04/2022  
No worries. The conclusion of the meeting was to define the data structure (a proposal is supplied above in JSON format) and we're likely to meet up on Sunday

 **Maiykul** 28/04/2022  
The idea behind the proposed data structure is

1. simple to serialize and deserialise to an object instance
2. the data drives what is shown without regard to *what* the data represents
3. "levels" property allows us to easily group cards at design time (or runtime)

Each card has an "imageRef" that can be used to show an image and a "content" property to show text. It's up to the UI to determine if these two properties are AND or OR conditionals

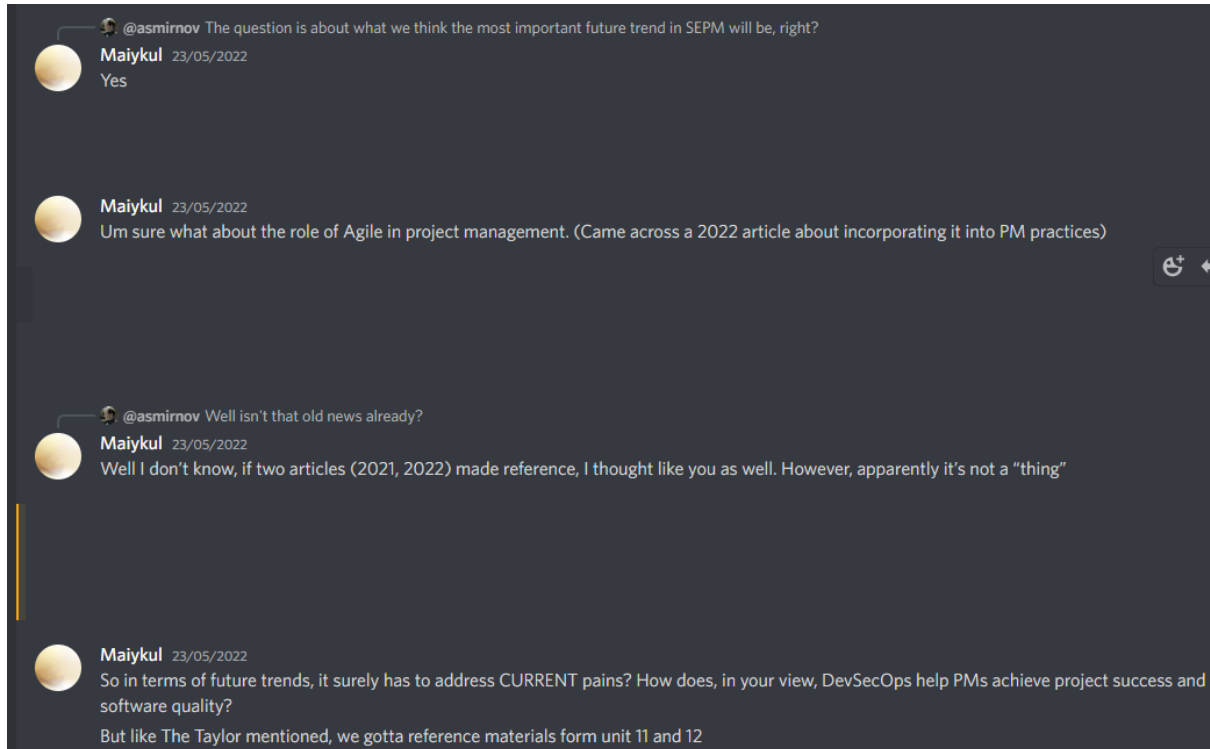

concerning the "refId", this supports Dr -Dre's bidirectional links. The *logic* of enforcing the "correct" links per level is not required because UI is only concerned about displaying what Data told it to display. So if a user turns over a card with a "refId" to a card not shown for a given level, then So-Be-It. Data told me so. (edited)

 **Maiykul** 05/05/2022  
hi [@everyone](#) just want to raise a question, is there anything that needs specific attention that I may help contribute toward?

 [@asmirnov](#) Can everyone else be available on Sunday [#general](#) ?

 **Maiykul** 05/05/2022  
Unfortunately, won't be available from Friday till next Wednesday.

👍 1

@asmirnov The question is about what we think the most important future trend in SEPM will be, right?

**Maiykul** 23/05/2022  
Yes

**Maiykul** 23/05/2022  
Um sure what about the role of Agile in project management. (Came across a 2022 article about incorporating it into PM practices)

@asmirnov Well isn't that old news already?

**Maiykul** 23/05/2022  
Well I don't know, if two articles (2021, 2022) made reference, I thought like you as well. However, apparently it's not a "thing"

**Maiykul** 23/05/2022  
So in terms of future trends, it surely has to address CURRENT pains? How does, in your view, DevSecOps help PMs achieve project success and software quality?  
But like The Taylor mentioned, we gotta reference materials form unit 11 and 12
