# Team Design Document Feedback

*Please be aware that the grade may change due to the moderation and adjustment process.*

## *Tutor's Feedback*

A good discussion of the SDLC methodology selected and also of the system design

I liked how you used the gherkin approach to refine the requirements (even though you didn't refer to the approach as being based on gherkin :))

Good discussion of estimates, although it would have been nice to see more explanation as to how estimates were arrived at

Good list of requirements and reasons for inclusion in the demo

Good plan and discussion - would have been nice to see products associated with sprints

A well-presented document with a wide range of relevant and current references. Unfortunately, there were several diagrams/ pictures included whose sources were NOT cited - this is a form of plagiarism - please be careful.
